

General Description on National Integrity Building Action Plan

President Ma has pointed out in his inaugural speech that one of the missions in new age is to “restore political ethics to regain the people's trust in the government.” The President also declared: “The new government will establish new example of integrity by strictly demanding integrity and efficiency from officers, as well as rebuilding well example of political-commercial interaction and prevent the contamination of money politics. I wish every civil servant with power of execution can remember that “Power corrupts and absolute power corrupts absolutely...The new government will be for all the people, remain non-partisan and uphold administrative neutrality. The government will not stand in the way of social progress, but rather serve as the engine that drives it.” Therefore, it is an important issue to plan for the blueprint of national integrity construction for current reformation.

In order to connect with the international trend of anti-corruption, monitor the integrity and ethics directions of public and private sectors concurrently, the Central Integrity Committee, Executive Yuan made resolution in the first committee meeting on October 3rd, 2008. Relevant suggestions made by the United Nations Convention against Corruption (UNCAC) and Transparency International were referred to draft the “National Integrity Building Action Plan” (hereinafter referred as “the Plan”) that stipulates the goals and strategies of national integrity construction by integrating “Combating Corruption Action Plan”, “Sweeping away Organized Crime and Corruption Action Plan”, “Subsequent Implementation Plan of “Sweeping away Organized Crime and Corruption Action Plan” and “Anti-corruption Action Plan”. Thus the vision of constructing strategic goal of national integrity development, creating a clean government and honest society can be fulfilled.

Integrity is a universal value. Since the UNCAC entered into force on the 14th December 2005, it has established the global anti-corruption legal framework in future. The issue of corruption is already beyond boundary of nations and no longer limited to governmental sectors. The promotion of integrity requires mutual participation of public and private sectors, as well as the social strength very much. In addition to integrating the 4 plans mentioned above and have been executed for numerous years, the objective of setting this Plan is to also redefine the connotation of “Integrity,” which establishes a direction and foundation for the sustainable development of national integrity construction.

The Plan does not adopt the binary thinking pattern of “elimination and

prevention of corruption.” Instead, the concept of “National integrity system” promoted by the Transparency International is adopted to improve integrity by integrating strengths of each sector in the nation with diversified strategy. The main contents are as follows:

1. Basis of the Plan (Point 1)
